ROMOTOP is one of the European leaders in the production of fireplace inserts and stoves.

ROMOTOP fireplaces and inserts appeal to their customers by design, top quality workmanship and innovative technical solutions of their products. The wide range of products meets the needs of standard and low-energy houses. Thermal energy can be stored in storage elements or through heat exchangers to be distributed throughout the dwelling. A choice of handmade tiles is available ceramics or natural stones.

More than a million households worldwide already enjoy from ROMOTOP products. Every product that leaves the production plant in Suchdol nad Odrou is the result of the joint efforts of all employees. Thanks to its modern production facilities, competent employees and qualified sales staff, the brand ROMOTOP is one of the European leaders in the industry. Production process with a high degree of robotization takes place on 30,000 m². Flexibility in deliveries to the customer is supported by our own logistics centre with truck transport.

Technology is what we enjoy, what we live for. Thanks to natural evolution, we know that the strongest in the industry today must no longer rely solely on the wisdom and experience of our ancestors. And it is out of respect for them that we feel obliged to keep pushing the boundaries as they once did. Where others still use words like fortel, history and tradition, we think about patents, innovation, the latest production technologies, efficiency and automation.

TECHNOLOGY AND DESIGN OF FUTURE

We respect nature, ecology is not only a topic for us, but also a commitment.

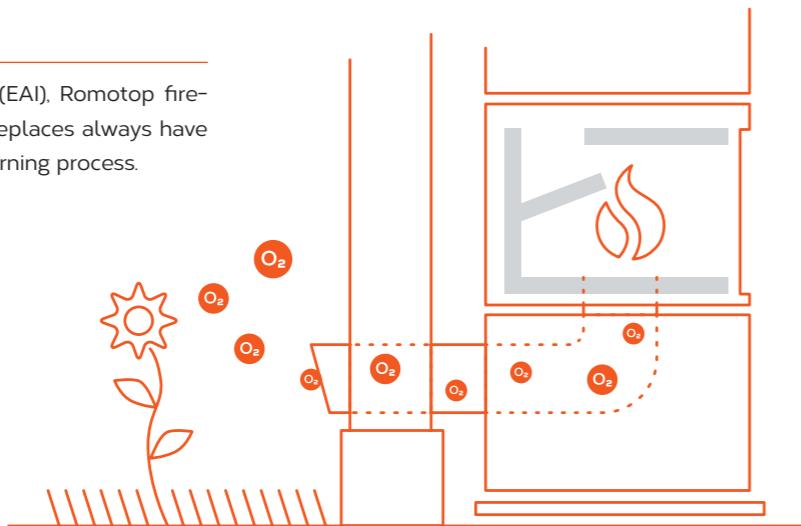

Fireplace stove and inserts from Romotop meet the strictest ecological limits required by EU directives and standards such as Ecodesign, German BlmSch V2, Austrian 15a B-VG and others. Our products contribute to environmental protection and the sustainable use of natural energy sources. Using wood for heating in modern stoves and fireplace inserts is proven to be environmentally friendly.

Technology

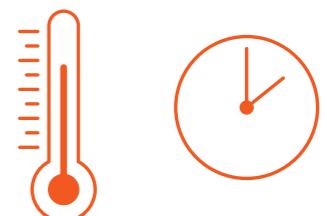

Always enough oxygen

Thanks to the external air intake (EAI), Romotop fireplace stoves, inserts and design fireplaces always have sufficient combustion air for the burning process.

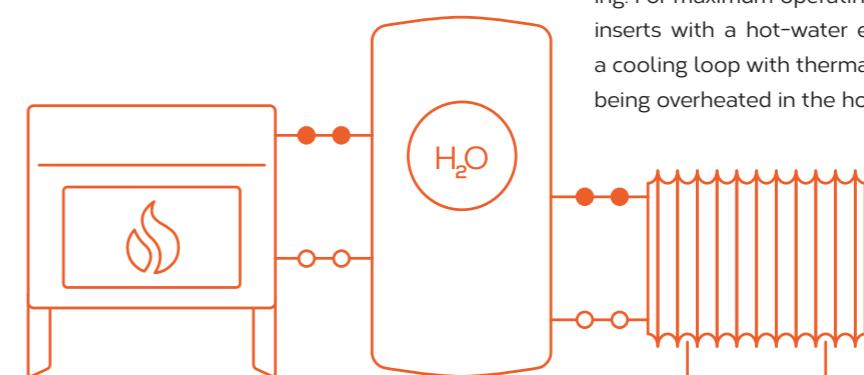

Better combustion dynamics

We always offer only the best. This is also true of the chamotte brick in the combustion chamber, which are characterized by high material stability, better combustion, accumulation properties and improved combustion dynamics.

Fireplace stoves and inserts with a hot-water exchanger

Romotop fireplace stoves and inserts with a hot-water exchanger offer high combustion efficiency and low heating costs. In combination with an accumulation tank, they can be used as the primary source of heating. For maximum operating safety, fireplace stoves and inserts with a hot-water exchanger are equipped with a cooling loop with thermal valve, which prevents water being overheated in the hot-water exchanger.

Precise and simple air control

Just like you, Romotop fireplace stoves, inserts and design fireplaces need air to function properly. Primary air helps the wood catch fire, while secondary air keeps the glass perfectly clean. The supply of both primary and secondary air can be controlled by a single element. Everything is designed for your maximum comfort.
